PPT, PPTX, XML, EXE, VSD, CAD, RTF, JIS - Supports all popular media formats (image, audio, video) - Built-in dictionary, with hundreds of thousands of commonly used words or phrases - Preview mode provides an exclusive, real-time view of the editing changes in the HTML page - HtmPad uses integrated color picker, to assign colors to all

elements in the HTML page - Supports many popular image/text formats and built-in image converter - Supports on-the-fly edition, including copying-and-pasting from the HTML page - Supports incremental search and supports auto-complete - Supports printing, emailing and saving as various popular file formats - Supports image and font cropping

and resizing - Supports social bookmarking with hotlinks to your favorite websites - Supports on-the

What's New In?

Do you need to create a simple HTML page for your website, to extend the capabilities of your advertisement banner, or even to use it as your own image? Once again, you don't need to start

from scratch, because HtmPad has everything in order, ready to be loaded up and used. The application allows you to build a simple banner from just a few clicks, without the need to manually copy-paste data. The website structure can be created through a few additional rows, allowing you to organize the whole site, keeping it neatly divided. Custom design

is supported, and colors can be changed from the very start. The level of detail is impressive, given all elements can be adjusted to the person's liking, from size, shape and background color to alpha levels. Once everything is set in place, you can preview the final design or print it out. Gives you free reign The application is designed in a way to be accessed whenever and

wherever, with a mouse or in mobile mode. The canvas provides plenty of room for your creations, saving you to extend the amount of areas to add even more content. Once again, the canvas is the only window where your main work area will appear, with a few additional tabs for preview and additional operations. The latter consists of saving,

deleting and loading your works. Even a preview window is offered, allowing you to see the page when it's loaded, and even a bit of code, which is helpful to find what section is causing problems. HtmPad Pros: In case you prefer to keep things a bit organized, the banner builder program supports both file organization schemes. Names, folders, and

even separate tabs, can be created to keep the parts clean and identify specific groups of files. The window can be dragged and dropped on almost any location, allowing you to be as creative as you like. The control panel even lets you adjust the position and size of individual elements, so you can create even greater diversity. Your creations can be printed using a

single click. HtmPad Cons: The program lacks basic elements, such as paragraph numbering and syntax highlighting, so you'll need to spend more time ensuring your code is kept in order. The editor is also barebones, without syntax highlighting, which is essential for spotting mistakes, and miscellaneous functions. Conclusion: In spite of the shortcomings,

HtmPad might just be the ideal program for those who prefer to see what they do

Windows 7, 8 or 10 1 GHz processor or faster 2 GB RAM 1 GB available hard disk space DirectX 9.0c Internet Explorer 10 To uninstall: Right-click the shortcut in your computer's start menu, point to "Properties," and click "Uninstall." What's New It's been a great summer and we've got big plans for the fall. Lots of new

features, fixes, and improvements! See what's new below: Gamepad support
