Compared to previous iterations of FIFA, new and improved micro-details lead to an increased realism of gaming experiences. Especially when tackling, opponents are easier to see since they will move in more realistic ways. Increased lightness of skin on female bodies lets players more closely resemble their reality counterpart. Players will show individual movement behaviour and posture, giving better representation of their true characteristics. The game will also feature the Active DNA Engine: a real-time opponent personality engine that will evaluate the characteristics of every player in a match. Its data will be applied to real-life players in game. For

example, data from player friendly passes will be applied to players to make them run slightly more like their real-life counterparts. This engine will enable players to put on extra speed or change their play style as the match progresses based on their real-life model. The Active DNA Engine creates more engaging, responsive play and never-before-seen personality in video games. Finally, the Brand New Team Talk system gives players incredible immersion in the game they're playing. The game monitors all actions on the field with real-time player movement and animation, simulating realistic player passes, defensive actions and skilled, high intensity real-life moves. The Brand New Team Talk system will be present in FIFA 22.

Player Body The Player Body in FIFA 22 has a standard proportion, with well-defined muscle groups. Not only will players be able to better predict the movement of every individual, but their arms and legs will also have more range of movement on the pitch. Improved animations and more realistic movements also bring about more realistic body shapes. The hair styles of players will

also have more unique characteristics, giving players more variation and the ability to look more unique. New and Improved Player Characteristics

FIFA 22 will feature the Brand New Player Experience, giving players more immersive, varied and realistic gameplay experiences. Players will be able to use their individual traits to their best advantage, no longer being held back by rigid player characteristics like defensive mindset or active mindset. The Brand New Player Experience is extremely user-friendly, as players are equipped with tools that make the gaming experience more realistic and immersive. A brand-new Realistic Damage System will take into account when a player is worn out, fatigued and the subsequent effects on a player's game-related performance. Players will be stronger when tired and feel more lethargic. FIFA 22 will continue the

Fifa 22

FIFA is a series of sports video games created by EA Canada and published by Electronic Arts. The series is developed for every major home computer game system from the 8-bit to the modern PC, console and handheld games systems. The gameplay of a typical FIFA game is characterised by deep and detailed management of player development and team tactics, as well as the player's physical attributes and performance, while maintaining elements from association football.

The series also includes tournaments, championships, skill-based competitions, and training/coaching mode. The FIFA franchise is well known for its lively player commentary, regularly featured by world-renowned commentators such as Bob Dylan, Noel Gallagher, John Mowlem, John Gaunt, and Robbie Savage. The series has won numerous industry awards, including multiple

Game of the Year awards and more than 23 honours in the Academy Sports + Outdoors National Sports Game of the Year Awards. FIFA 18 review -'shatteringly brilliant' Read more FIFA 21 is the best-selling video game franchise of all time.

Then there are all of the football superstars

in the game – Cristiano Ronaldo, Lionel Messi, Neymar, Antoine Griezmann and many more. All your favourite teams and players have transfer kits, in-game nicknames

What's new in Fifa 22:

- **Slip tackle animations have been tweaked- Slip tackles now behave differently than standard tackles: they can be restricted by gaining possession, some players have a throw-in effect after they are tackled, and some players may position themselves strategically between the opposition and the ball.**
- **Particular attention has been paid to the dynamic interactions between defenders and attacking players in mid-range and long passing situations. When defending in this situation, the defender may try to physically intimidate an opponent. More often than not, it will not succeed.**
- **Goalkeepers can change grips on the ball- Goalkeepers can now change grips on the ball, leading to a greater variety of goalkeeping animations. What's more, attackers can now dribble past opponents and attempt to score from inside or outside the box, while the goalkeeper is playing the ball.**
- **PC Exclusive Coaching Notes- Achievements have been extended to include all categories: Multiplayer and Local, Quick Play and Seasons (Peak Multiplayer). All categories from Champions League and International tournaments are now available. This means that you can start enjoying**

all the sensations of a tournament right after downloading the game.

- **Improved handling- Passing has been updated and got a new button mapping. The new button maps include an easier and more intuitive pressing system. Added more depth to the running and jumping animations. The way players step on the ball during the tackle has been changed. Now the player has to grab the ball and punch the ground, rather than simply jumping on the ball. The animation of the sprint has been improved, and the speed is constantly varied. The running animation for attacking players runs even more fluidly, from low to high speed. The jumping animation for defensive players and midfielders has been improved. The long pass is now much easier to control, and the trick pass allows for some improvisation. Neuer also performs a leap kick, a particular type of kick that emphasises his ability to lead/score from set pieces.**
